

HEALTH CARE

CHAPTER 1

INTRODUCTION AND OBJECT OF PROJECT

INTRODUCTION

This project is specially designed for Patients, because in this project Patient can book appointments online which registered in this project HealthCare.

Patients can place their appointment through our project “Healthcare”.

The “healthcare.com” project is a multi-user system. It has been developed in a way that allows user to perform the function smoothly and with proper accuracy.

The system is developed in PHP, My-SQL, Java script and some other software like CorelDraw for designing purpose.

So, this system is very useful for all visitors.

HEALTH CARE

How It Works

In this project first of all a homepage is displayed for all visitors, customers as well as registered customers.

This page will give information about Your HealthCare details etc.

If user wants to place their order then they have to Login first.

If the user is not a Registered User, He / She will have to click on the Signup Button and fill all fields in the registration form.

After registering in HealthCare there you can see login button. Users will have to login with registered mobile number and password.

After login, user will see User-Panel of ‘HealthCare’ Website. There is various information about café menu, order online and needs etc.

HEALTH CARE

CHAPTER 2 TOOLS OR PLATEFORM

Requirements Details

SOFTWARE :-

- XAMPP Server

Any Browser like (Google Chrome, Internet Explorer, Mozilla etc.)

HARDWARE:-

- Processor : P3 or Higher
- RAM : 2 Gb Or Higher
- Hard Disk : 256 GB or higher

TOOLS Used :-

- Front End : HTML, CSS, JavaScript
- Back End : PHP
- Operating System : Windows 7 Or Higher

HEALTH CARE

CHAPTER 3

SYSTEM ANALYSIS

- 3.1 Identification of needs
- 3.2 Preliminary investigation
- 3.3 Feasibility Study
- 3.4 Project Planning
- 3.5 Project Scheduling (PERT Chart and Gantt chart)
- 3.6 Software Requirement Specification
- 3.7 Data Models

3.1 IDENTIFICATION OF NEEDS

- The viewer of our system does not need to login as long as User wants to browse HealthCare Menu only. But the User wants to book appointments with Healthcare they must be registered to our website.
- User need to provide user name, mobile number and password when creating an account.

HEALTH CARE

SDLC MODEL

HEALTH CARE

SDLC STEP

- Requirement Gathering
- Requirement Specification and Analysis
- Design
- Coding
- Maintenance

❖ REQUIREMENT GATHERING: -

In this phase of SDLC necessary information are collected. We collect the information in this phase through questionnaire and online websites also. We are also note down the requirements of the User.

❖ REQUIREMENT SPECIFICATION AND ANALYSIS: -

The requirements are being specify in this phase. Analyst checks how the current system is working and then plans how to develop the proposed system and implement it.

HEALTH CARE

❖ DESIGN: -

In this phase the design of both front-end and back-end is decided. In this phase we using HTML, CSS for designing and designing of tables are also done properly in this phase.

❖ CODING: -

After the completion of designing there is a turn for coding. Coding is completed in various files. In most case coding takes the more time than the design.

❖ TESTING:-

In testing phase first unit level testing is done. In unit level testing the software is tested in an individual file. After the unit testing of each file the integration testing done. In integration testing the files are tested into their own package. At last, in the system testing the whole system is run on the INTERNET ENVIRONMENT.

❖ Maintenance:-

The proper maintenance is given as indicate in the SRS (Software Requirement Specification). It is a responsibility of Developer to maintain the software during its criteria mentioned in SRS document.

HEALTH CARE

3.2 PRELIMINARY INVESTIGATION

❖ OUR OBJECTIVES :-

- Admin can add new, Delete and Edit records.
- User can browse category wise.
- User can handle all type of information easily.
- User can search through search bar.
- Easy updating, time saving, quick process.
- User can update their registration information.
- User can get guidance of whole HealthCare through different steps.

HEALTH CARE

❖ PLATFORM SPECIFICATION: -

- We have used windows based developing graphical based applications our software will provide support GUI efficiently. It must for our system because for our project.
- It is very useful and support of PHP and Java Script control and component.
- Use of Table for menu create and display Form in it.
- It is easy to integrity database report use with Data Report.
- PHP platform is mostly use for development Web Based Application.
- Regular version of operating system use with it.
- Always need to back end tool for developed web Application with front tool.
- Starting a new business all of the organization have some requirement for it.
- There are many reasons for starting a new business or modify the old system.
- Business require set is depend on top level organization that is manager, administrator etc.

HEALTH CARE

3.3 FEASIBILITY STUDY

- A feasibility analysis usually involves a through assessment of the operational (need), financial and technical aspects of a proposal.
- Feasibility study is the test of the system proposal made to identify whether the user needs may be satisfied using the current software and hardware technologies, whether the system will be cost effective from a business point of view and whether it can be developed with the given budgetary constraints.
- A feasibility study should be relatively cheap and done at the earliest possible time.
- Depending on the study, the decision is made whether to go ahead with a more detailed analysis.
- When a new project is proposed, it normally goes through feasibility assessment.
- Feasibility study is carried out to determine whether the proposed system is possible to develop with available resources and what should be the cost consideration.
- Facts considered in the feasibility analysis were.

HEALTH CARE

1) TECHNICAL FEASIBILITY: -

- Technical feasibility is considered. In terms of technical requirements and their availability in the market. It determines whether the current level of technology supports the proposed system or not. The technical possibility of proposed system is as follows.
 - The unit does possess the hardware as well as related software for the project.
 - The proposed system does not require much technical detail.
 - It just requires window operating system.
 - The organization has already purchased all the enough devices for latest technical.
 - These technical specifications are easily available in the market.
 - Hence, the proposed system is technically feasible.

2) ECONOMICAL FEASIBILITY STUDY: -

- Economic justification is generally the “Bottom Line” consideration for most systems.
- Economic justification includes a broad range of concerns that includes cost benefit analysis.
- In this we weight the cost and the benefits associated with the candidate system and if it suits the basic purpose of the organization i.e. profit making, the project is making to the analysis and design phase.
- The financial and the economic questions during the preliminary investigation are.

HEALTH CARE

- Verified to Estimate the Following:
- The cost to conduct a full system investigation.
- The cost of hardware and software for the class of application being considered.
- The benefits in the form of reduced cost.
- The proposed system will give the minute information, as a result the performance is improved which in turn may be expected to provide increased profits.
- This feasibility checks whether the system can be developed with the available funds. This can be done economically if planned judicially, so it is economically feasible. The cost of project depends upon the number of man hours required.

3) OPERATIONAL FEASIBILITY STUDY: -

- It is mainly related to human organizations and political aspects. The points to be considered are:
 - What changes will be brought with the system?
 - What organization structures are disturbed?
 - What new skills will be required?
 - Do the existing staff members have these skills? If not, can they be trained in due course of time?
- The system is operationally feasible as it very easy for the End users to operate it. It only needs basic information about Windows platform

HEALTH CARE

3.4 PROJECT PLANNING

No	Task Name	Start	Finish	Duration
1	Planning	20 July	30 July	11 Days
2	Analysis	30 July	14 August	15 Days
3	Designing	15 August	22 August	8 Days
4	Coding	23 August	15 September	24 Days
5	Implementation	16 September	21 September	6 Days
6	Testing	22 September	25 September	4 days
	Total			68 Days

HEALTH CARE

3.5 PROJECT SCHEDULING

❖ PERT CHART :-

- This Chart represents the development of our system date wise.

HEALTH CARE

❖ GANTT CHART:-

- This is a graphical representation of the date wise development of our project system. It is very similar to the PERT chart expect that it is represented graphically.

ID	Task Name	DATE	DATE	DATE	DATE	DATE	DATE
1	Planning	20July-30July					
2	Analysis		30July-14Aug				
3	Designing			15Aug-22Aug			
4	Coding				23Aug-15 Sept		
5	Implementation					16Sept-21 Sept	
6	Testing						22Sept-25 Sept

HEALTH CARE

3.6 SOFTWARE REQUIREMENT

❖ PHP: -

- PHP is a widely-used general-purpose scripting language that is especially suited for Web development and can be embedded into HTML.
- PHP generally runs on a web server, taking PHP code as its input and creating Web pages as output.
- However, it can also be used for command-line scripting and client-side GUI applications.
- PHP can be deployed on most web servers and on almost every operating system and platform free of charge.
- The PHP Group also provides the complete source code for users to build, customize and extend for their own use.
- PHP primarily acts as a filter. The PHP program takes input from a file or stream containing text and special PHP instructions and outputs another stream of data for display.
- From PHP 4, the PHP parser compiles input to produce byte code for processing by the Send Engine, giving improved performance over its interpreter predecessor. PHP 5 uses the Send Engine II.
- Originally designed to create dynamic web pages, PHP's principal focus is server-side scripting.

HEALTH CARE

❖ My SQL: -

- *MySQL is a database management system.*
 - A database is a structured collection of data. It may be anything from a simple shopping list to a picture gallery or the vast amounts of information in a corporate network. To add, access, and process data stored in a computer database, you need a database management system such as MySQL Server. Since computers are very good at handling large amounts of data, database management systems play a central role in computing, as standalone utilities, or as parts of other applications.
- *MySQL databases are relational.*
 - A relational database stores data in separate tables rather than putting all the data in one big storeroom. The database structures are organized into physical files optimized for speed. The logical model, with objects such as databases, tables, views, rows, and columns, offers a flexible programming environment. You set up rules governing the relationships between different data fields, such as one-to-one, one-to-many, unique, required or optional, and “pointers” between different tables. The database enforces these rules, so that with a well-designed database, your application
 - never sees inconsistent, duplicate, orphan, out-of-date, or missing data.

HEALTH CARE

- The SQL part of “MySQL” stands for “Structured Query Language”. SQL is the most common standardized language used to access databases. Depending on your programming environment, you might enter SQL directly (for example, to generate reports), embed SQL statements into code written in another language, or use a language-specific API that hides the SQL syntax.
- SQL is defined by the ANSI/ISO SQL Standard. The SQL standard has been evolving since 1986 and several versions exist.
- ***MySQL software is Open Source.***
 - Open Source means that it is possible for anyone to use and modify the software. Anybody can download the MySQL software from the Internet and use it without paying anything. If you wish, you may study the source code and change it to suit your needs. The MySQL software uses the GPL (GNU General Public License), <http://www.fsf.org/licenses/>, to define what you may and may not do with the software in different situations. If you feel uncomfortable with the GPL or need to embed MySQL code into a commercial application, you can buy a commercially licensed version from us.
 - ***The MySQL Database Server is very fast, reliable, scalable, and easy to use.***
- ***MySQL Server works in client/server or embedded systems.***

HEALTH CARE

❖ JAVA Script: -

- **JAVA SCRIPT ORIGINS: -**

- JavaScript was released by Netscape and Sun Microsystems in 1995.
- However, JavaScript is not the same thing as Java.
 - It is a programming language.
 - It is an interpreted language.
 - It is object-based programming.
 - It is widely used and supported.
 - It is accessible to the beginner.

- **USES OF JAVA SCRIPT: -**

- Use it to add multimedia elements With JavaScript you can show, hide, change, resize images, and create image rollovers. You can create scrolling text across the status bar.
- Create pages dynamically Based on the user's choices, the date, or other external data, JavaScript can produce pages that are customized to the user.

HEALTH CARE

❖ HTML: -

- HTML is the standard Mark-up language for creating web pages and CSS and JavaScript it forms a triad of cornerstone technologies for the WWW.
- Web browsers receive HTML documents from a web server or from local storage and render them into multimedia web pages.
- HTML describes the structure of a web page semantically and originally included cues for the appearance of the document.
- Hyper Text Mark-up Language (HTML) can embed programs written in a scripting language such as JavaScript which affect the behaviour and content of web pages.
- Inclusion of CSS defines the look and layout of content. The World Wide Web consortium (W3C), maintainer of both the HTML and the CSS standards, has encouraged the use of CSS over explicit presentational HTML since 1997.

HEALTH CARE

❖ CSS: -

- Cascading Style Sheet (CSS) is a Style sheet language used for describing the presentation of a document written in a Mark-up language. Although most often used to set the visual style of web pages and user interfaces written in HTML and XHTML, the language can be applied to any XML document, including plain XML, SVG and XUL, and is applicable to rendering in speech, or on other media. Along with HTML and JavaScript, CSS is a cornerstone technology used by most websites to create visually engaging web pages, user interfaces for web applications, and user interfaces for many mobile applications.
- CSS is designed primarily to enable the separation of presentation and content, including aspects such as the layout, colors, and fonts.

HEALTH CARE

3.8 NORMALIZATION

➤ Normalization rules are divided into following normal form.

1. First Normal Form

2. Second Normal Form

3. Third Normal Form

1) First Normal Form (1NF)

As per First Normal Form, no two Rows of data must contain repeating group of information id each set of columns must have a unique value, such that multiple columns cannot be used to fetch the same row. Each table should be organized into rows, and each row should have a primary key that distinguishes it as unique.

The Primary key is usually a single column, but sometimes more than one column can be combined to create a single primary key. For example, consider a table which is not in First normal form.

2) Second Normal Form (2NF)

As per the Second Normal Form there must not be any partial dependency of any column on primary key. It means that for a table that has concatenated primary key, each column in the table that is not part of the primary key must depend upon the entire concatenated key for its existence. If any column depends only on one part of the

Concatenated key, then the table fails Second normal form.

HEALTH CARE

In User Table the candidate key will be column. Now, both the above tables qualify for Second Normal Form and will never suffer from Update Anomalies. Although there are a few complex cases in which table in Second Normal Form suffers Update Anomalies, and to handle those scenarios Third Normal Form is there.

3) Third Normal Form (3NF)

Third Normal form applies that every non-prime attribute of table must be dependent on primary key, or we can say that, there should not be the case that a non-prime attribute is determined by another non-prime attribute. So, this transitive functional dependency should be removed from the table and also the table must be in Second Normal form. For example, consider a table with following fields. In this table User id is Primary key, but street, city and state depend upon Zip. The dependency between zip and other fields is called transitive dependency. Hence to apply 3NF, we need to move the street, city and state to new table, with Zip as primary key.

- The advantage of removing transitive dependency is,
 - Amount of data duplication is reduced.
 - Data integrity achieved.

HEALTH CARE

❖ **Registration of Doctor:** This is a Doctor Registration Form.

The header features a logo on the left with a heart and the word 'HEALTHCARE'. To its right is a blue circular icon depicting a doctor in a white coat pointing at a screen displaying various medical icons like a heart, brain, and DNA. Below the logo is a horizontal navigation bar with seven items: Home, Doctor, Patient, Disease, Hospital, About, and FeedBack. Each item has a corresponding thumbnail image: a doctor shaking hands with a patient, a doctor with arms crossed, a doctor examining a patient, a doctor in an operating room, a doctor with a patient, a close-up of a stethoscope, and a doctor smiling.

HEALTH CARE

❖ About Us: This is about us page.

Home	Doctor	Patient	Disease	Hospital	About	FeedBack

About Us

We are creating primary health care which is comprehensive, convenient, caring and preventive. We deliver this experience through a seamless integration of primary care clinics and the S&K HealthCare app which brings together all health and wellness services on one platform. We will be with you every step of the way in your journey towards Good Health. We are now live in Junagadh! With you always! We combine the best of the online and the offline world of primary health to bring you a range of convenient services!

InstaDoc: Our panel of 24x7 Online Doctors

Access advice from qualified physicians, anywhere anytime on the S&K HealthCare app. Our private and secure chat/ call feature ensures that you have access to qualified advice wherever you go, anytime.

Consult - on our curated Clinic network

We connect you with the best primary care doctors near you; our network of curated clinics with seamless online appointment booking are carefully selected to provide you with the best primary care. Our team of partner general physicians, pediatricians, gynecologists and cardiologists always empower you with the right choices for better outcomes.

Integrated Labs

Through a 3 step process, access the best labs in the city from the comfort of your home or walk in to one of our partner labs near you. Our labs are digitally integrated so that you don't need to worry about physically collecting your results. Our pricing is transparent- no hidden charges or costs.

Buy Medicines

Buy medicines online through our partners, delivered at your doorstep. Set up medication reminders so that you never forget the next dose. Digital prescriptions generated at our clinics make it very easy for you to order medicines and set reminders.

❖ Privacy Policy: This is Privacy Policy Page.

PRIVACY POLICY

This Privacy Policy ("Policy") is made, and hosted in accordance with the following Information Technology Laws :

a. Information Technology Act, 2000 b. Rule 3(1)(g) of the Information Technology (Intermediary Guidelines and Digital Media Ethics Code) Rules, 2021; c. Rule 4 of the Information Technology (Reasonable Security Practices and Procedures and Sensitive Personal Information) Rules, 2011. This Policy does not require a written record with respect to the information technology laws. This Policy shall be considered an electronic record requiring no signature. This Policy should be read in conjunction with the "Terms and Conditions of Use" of the Digital Platform which are deemed to have been incorporated herein by way of reference.

Usage

This Policy conveys the mode, method and manner in which Health collects, stores and disseminates the Personal Information ("Information") from the User(s) (hereinafter referred to as "User", "Users" or "you"). For the purpose of this Policy, User(s) shall mean such individuals who are competent to contract under the Indian Contract Act, 1872 and wish to subscribe to the Services offered by Health by itself or through third party service providers) on this Digital Platform by visiting this Digital Platform. Health therefore requests the User(s) on this Digital Platform to carefully and comprehensively read and understand the Policy before they consent to the terms herein and start using or accessing this Digital Platform or subscribing to any of the Services offered through this Digital Platform.

Purpose for which information is collected from User(s)/you

The Information provided by User(s)/you and collected by us on this Digital Platform may be accessed/used/disseminated for the following purposes and the User(s) explicitly consent to the same: (i) To provide the User(s) with the required products and services including medical products and services, including those provided by our Analytical purposes in anonymous form or as de-identified data and for this purpose we may take assistance of our affiliates and trusted business partners in India or Outside India for research, development, studies, betterment of services, understanding the User(s)' Experience, serving the individual needs of the User(s) and improving the quality of services and care. (ii) To provide the User(s) with the required products and services including medical products and services, including those that will identify a single user. (iii) Obtaining feedback f. For conducting Audit(s)/Review g. Record their telephonic, Video and chat conversations and/or consultations during their interaction with HCPs and other support staff and Health can use it for legal, training and quality purposes When User(s) interact with or respond to an email campaign sent by Health , User(s) may be redirected to a third party website(s). The third-party website may collect information about the User(s) device, browser, IP address, operating system, interaction with an email etc. The third-party websites may also use cookies or other tracking technologies to identify the behavioural pattern of the User(s).

Processing, Disclosure and Sharing of information collected from the User(s)/you

a. Information collected from the User(s)/HCPs/HSPs on the Digital Platform forms an essential part of business structure and may be shared/used as described hereinbelow and User(s) hereby consent to the same: (i) Third Party Service Provider(s), Information including but not limited to contact details, email ID health information and such other information as may be required will be shared with Third Party Service Provider(s), retailers, logistics service providers, E-mail Service Providers, Payment Processors, Marketing Agencies, Data Analytics Services, Information is likely to be exchanged while fulfilling orders, delivering medicines, laboratory reports etc. and for sending communications on the Digital Platform and through e-mailers. (ii) Audit/Review Purposes User(s) Information/data/consultation transcripts and/or summary (including but not limited to telephonic, Video and chat conversations and/or consultations during their interaction with HCPs and other support staff and Health can use it for legal, training and quality purposes When User(s) interact with or respond to an email campaign sent by Health , User(s) may be redirected to a third party website(s). The third-party website may collect information about the User(s) device, browser, IP address, operating system, interaction with an email etc. The third-party websites may also use cookies or other tracking technologies to identify the behavioural pattern of the User(s). (iii) Analytics Purpose(s), User(s) Information/data in de identified form may be used by Health or shared with Third Party(ies) either in India or outside India for Analytical Purposes including but not limited to AppsFlyer Ltd. for Improving User(s) experience and User(s) use of the Platform. (iv) Other Associated Services, User(s) Information/data in de identified form may be used by Health or shared with Third Party(ies) for improving User(s) experience/service. Health assures that any information exchanged herein shall be in accordance with its Privacy Policy. (v) Information required by law, i. Health may share the information given by the User(s) if directed by any judicial or a statutory authority, or against receipt of judicial or statutory order or to comply with applicable laws. ii. In case of any emergency, Health may share the information given by the User(s) if directed by any judicial or a statutory authority or against receipt of judicial or statutory order or to the commitments made under the Privacy Policy. ii. Information required for investigation, Health may share information in order to investigate, prevent, or take action regarding illegal activities suspected or fraud situations involving potential threats to the physical safety of any person. iii. Violations of these Terms and/or privacy policy, or of other rules and regulations of the platform, which may have been imposed by Health or its service providers. (vi) User(s) consent/ approval will be shared with the User(s). c. Destruction of Data/Information Supplied by the User(s)/you Any data/information supplied by the User(s)/you and collected by us shall be securely stored for the duration required under applicable law. In the event any User(s)/you are deleting their account or a User(s) account becomes inactive, the concerned User(s) shall not have access to the data/information supplied and collected by us and the same shall be deleted from our servers after the duration for which it is required to be stored.

Editing Information

After User(s) create the account and if there is any change in the Information provided earlier, the User(s) can edit their profile and make necessary modifications. User(s) are solely responsible for the Information provided by them.

Cookie Policy

This Website and Mobile Application uses cookies to store certain data (that is not sensitive personal data or information) that is used to provide customized information when the User(s) or Unregistered User(s) returns to the Website. "Cookies" are used to store User(s) or Unregistered User(s) preferences and to track User(s) or Unregistered User(s) trends, so as to enhance their interactive experience and generally improve the website's services to them.

Promotions

With a view to provide better Services Health may send various communications to the User(s) regarding its Products/Services If the User(s) do not wish to receive such communications they may unsubscribe to such communications as per the procedure set out in those communications.

Financial Information

For availing certain Services/Products the User(s) may be required to subscribe/purchase such Services by entering requisite payment details. The payment details are captured by third party service providers and the User(s) are advised to read the terms and conditions of such third party service providers before making any payment. For the purpose of this section it is claimed that the Digital Platform does not collect sensitive personal or security related information like passwords etc., which are generated by the User(s) themselves. The User(s) are advised to take care of their personal and security related information. Health expressly disclaims any and all liabilities associated, therewith. User(s) are advised to note this while providing their personal or security related information.

Access to the Digital Platform

a. Registered User(s) will have complete access to the Digital Platform b. Unregistered User(s) will have restricted access to the Digital Platform Unregistered User(s) please note that you shall also be bound by the terms of this Policy as well as the Terms of Use of this Digital Platform

Third Party Links

User(s) may note the Third Party Service Providers are not under the direction, supervision and control of Health and Health expressly disclaims any and all liabilities associated, therewith. The User(s) are hereby advised to carefully read the Terms of Use and the Privacy Policy and other relevant documents of such third party service providers/website as the same may be available on the same. The User(s) shall be bound by the terms and conditions of such third party digital platform may collect various types of information of the User(s) and their behavioural patterns. Health definitely conveys to the User(s) that it does not monitor or have any control over the affairs of such third party websites or the contents therein. User(s) are categorically advised to get in touch with the third party digital platform and seek information/clarification about their operations and functioning.

USER INFORMATION

'User information' for the purpose of this Policy includes the User's personally identifiable information including but not limited to name, email address, residential address, phone number, photograph, identity and address proof and other information collected by Health to provide its Services/Products to the User through their Digital Platform. User(s) has the option not to provide any information if they do not intend to avail any Service/Product. If any User(s) are providing information on behalf of any legal entity or third party, such User(s) should be authorized to provide the information.

SECURITY AND RESTRICTIONS

To protect your privacy and security, Health takes steps to verify Users' identity before granting Users access to accounts, or before Users can make corrections to their information. Users are advised to maintain a strong password to help ensure the security of user accounts. Health implements high standard security measures to protect User(s) information from unauthorized access. This includes using state-of-the-art security techniques, including multi-factor authentication methods as per industry standards and established best practices to protect information of Users which is collected by Health . Notwithstanding the above, User(s) may note that no online platform can fully eliminate the security risks. Health shall take all possible measures to protect the date, security, confidentiality and integrity of the User(s) information and user data. The User(s) shall be aware that the Internet where the Digital Platform is hosted is not completely a secure environment, therefore Health does not warrant a 100% security of the User(s) Information/data from being hacked/misused/copied/used unauthorized and in such cases User(s) agree not to hold Health responsible for any consequences arising therefrom.

GENERAL TERMS

This Policy is to be read in conjunction with and shall be deemed to be part of the Digital Platform Terms of Use The User Information resides in Health 's database for a certain period of time even after the User ceases to use or access the Digital Platform and in such cases Health shall not be liable for any usage of the User Information after the User ceases to use or access the Digital Platform.

HEALTH CARE

❖ **Terms & Conditions:** This is Terms & condition page.

Terms & Conditions

These Terms and Conditions of Use (hereinafter referred to as "Terms") as hereinafter appearing are published in accordance with the provisions laid down under Rule 3(1)(a) of Information Technology (Intermediary Guidelines and Digital Media Ethics Code) Rules, 2021 and the same constitutes "Electronic Record" within the meaning of Section 2(t) of the Information Technology Act, 2000 and the Rules framed thereunder. These Terms are also governed by all applicable laws including but not limited to Indian Contract Act, 1872. These Terms being an electronic record does not require any signature.

Preface

HealthCare is set up to leverage the power of digital technology to empower healthcare providers and consumers in India.

Entire Agreement

This Agreement (hereinafter defined) sets out the Terms under which the User(s) (hereinafter defined) is/are permitted to use the Website/Mobile Application and the Services (hereinafter defined) available thereunder.

Changes

HealthCare reserves its rights to modify, update, change, edit, alter, amend, revise or substitute (collectively "Revisions") the Agreement from time to time. Any Revisions made will be effective immediately upon their posting on the Digital Platform. Any material changes will be notified to the User(s) either through the Services, email(s), SMS or In-app push notifications. User(s) are encouraged to review these Terms periodically for any updates or Revisions. User's continued use of the Services consequent to any Revisions, shall be deemed acceptance of such Revisions/revised terms and conditions.

Acknowledgement

Before accessing or creating User Account (hereinafter defined) on the Digital Platform, User(s) are advised to carefully read these Terms and the Digital Platform's Privacy Policy available at www.HealthCare.com. The Terms and the Privacy Policy are collectively referred to as "Agreement" herein. By accessing/browsing the Website/ Mobile Application for any information and/or availing the Services, the User(s) hereby acknowledge that they have read, understood and accept all the terms and conditions of the Agreement and agree to abide by the same. If the User(s) do not consent or accept the terms and conditions of the Agreement they are advised to forthwith disengage from the Website/Mobile Application and stop the access/use thereof. HealthCare reserves the right to (i) accept or reject the request of the User(s) to create an account, (ii) terminate the account of registered User(s) for unauthorized use, or (iii) refuse the Services offered through this Digital Platform due to non-availability of Services or otherwise.

Eligibility for accessing and availing the available Services on the Digital Platform

Any person aged 18 years or above and capable of entering into a contract under the Indian Contract Act, 1872 and subject to acceptance by HealthCare is permitted to create/ access User account to avail the available Services. Minors are prohibited from accessing or creating User Account; however Legal Guardian of the Minors can avail the available Services for Minors in accordance with applicable laws. Services are available only for the citizens of India and in the Territory. Users' may please note that certain Services may be available or limited to only particular area within the Territory

HEALTH CARE

❖ Appointment Page: This is Appointment List.

The screenshot shows the homepage of a healthcare website. At the top left is the 'HEALTHCARE' logo. To its right is a banner for 'World Health Day' featuring a yellow heart with a green stethoscope and the quote 'What is called genius is the abundance of life and health' from www.diseases.in. Below the banner is a navigation bar with tabs: 'Appointment', 'Blog', 'Profile', 'Feedback', and 'Log Out'. Underneath the navigation bar is a row of seven medical-related images: a doctor shaking hands with a patient, a smiling doctor, a doctor examining a patient's ear, a doctor attending to a patient in a hospital bed, an older man being examined by a doctor, a close-up of a stethoscope, and a doctor holding a patient's arm. Below these images is a table titled 'Patient Number', 'Patient Name', 'Date', 'Time', 'Mobile', and 'Delete'. The table contains four rows of data:

Patient Number	Patient Name	Date	Time	Mobile	Delete
23	sanjeev	2022-08-31	11:55	9874563215	<input type="button" value="Delete"/>
24	raj	2022-08-31	05:14	9874563253	<input type="button" value="Delete"/>
25	Prit	2022-08-29	01:11	9563636325	<input type="button" value="Delete"/>
27	ramesh	2022-08-31	22:22	9585745685	<input type="button" value="Delete"/>

The screenshot shows the footer section of the website. On the left is the 'HEALTHCARE' logo. In the center are links to 'HealthCare', 'Privacy Policy', and 'Terms & Conditions'. On the right are links to 'About Us' and 'Contact Us'. Below these links is the text '2022.All rights reserved.' and 'Developed by: Sanjeev Gohil & keyur Vaghela'.

HEALTH CARE

❖ Update Form: This is Update Form.

The screenshot shows a clean, modern design with a light gray header and footer. The main content area has a white background. The navigation bar is simple and functional. The images in the grid are diverse, representing various medical scenarios and professionals.

Blog Spot	
Doctor Name	BLOG
Dr. Vtasal	A heart attack (myocardial infarction or MI) is a serious medical emergency in which the supply of blood to the heart is suddenly blocked, usually by a blood clot. A heart attack is a medical emergency. Call 999 and ask for an ambulance if you suspect a heart attack.
Dr. Alpa	The term lung disease refers to many disorders affecting the lungs, such as asthma, COPD, infections like influenza, pneumonia and tuberculosis, lung cancer, and many other breathing problems. Some lung diseases can lead to respiratory failure
Dr.Ramesh Vaja	Most people infected with the virus will experience mild to moderate respiratory illness and recover without requiring special treatment. However, some will become seriously ill and require medical attention. Older people and those with underlying medical conditions like cardiovascular disease, diabetes, chronic respiratory disease, or cancer are more likely to develop serious illness. Anyone can get sick with COVID-19 and become seriously ill or die at any age.

HEALTH CARE

❖ Appointment List: This is Appointment list.

The screenshot shows a healthcare website interface. At the top left is a logo with a heart and the word "HEALTHCARE". In the center is a banner for "World Health Day" featuring a green heart and a stethoscope, with the quote "What is called genius is the abundance of life and health" and the website "www.diludesi.in". Below the banner is a navigation menu with links: Home, Doctor, Patient, Disease, Appoinment, Hospital, City, Specialist, Faq, Blog, FeedBack, and LogOut. Under each menu item is a small image related to healthcare. To the right of the menu is a table titled "Appointment" with columns for Id, Patient Name, Date, Time, Mobile, and Delete. The table contains 12 rows of appointment data. At the bottom right of the page is a footer with the text "Devloped By: Sanjeev Gohil & Keyur Vagh" and "©2022.All Rights Reserved."

Id	Doctor Name	Information	Photo	Delete
12	Dr. Vtasal	A heart attack (myocardial infarction or MI) is a serious medical emergency in which the supply of blood to the heart is suddenly blocked, usually by a blood clot. A heart attack is a medical emergency. Call 999 and ask for an ambulance if you suspect a heart attack.		<input type="button" value="Delete"/>
13	Dr. Alpa	The term lung disease refers to many disorders affecting the lungs, such as asthma, COPD, infections like influenza, pneumonia and tuberculosis, lung cancer, and many other breathing problems. Some lung diseases can lead to respiratory failure.		<input type="button" value="Delete"/>
14	Dr.Ramesh Vaja	Most people infected with the virus will experience mild to moderate respiratory illness and recover without requiring special treatment. However, some will become seriously ill and require medical attention. Older people and those with underlying medical conditions like cardiovascular disease, diabetes, chronic respiratory disease, or cancer are more likely to develop serious illness. Anyone can get sick with COVID-19 and become seriously ill or die at any age.		<input type="button" value="Delete"/>

TESTING

- 6.1 Techniques and Strategies
- 6.2 Cost Estimation Model
- 6.3 Future Scope and Further Enhancement of the Project
- 6.4 Bibliography
- 6.5 Appendices
- 6.6 Glossary

6. 1 TECHNIQUES AND STRATEGIES

Testing is a process to show the corrections of the program. Testing is needed to show completeness, to improve the quality of the software and to provide the maintenance aid. Some testing standards are therefore necessary reduce the testing costs and operation time.

Testing software extends throughout the coding phase and it represents the ultimate review of configurations, design and coding. Based on the way the software reacts to these testing.

We can decide whether the configuration that has been built is study or not. All components of an application are tested, as the failure to do so many results in a series of bugs after the software is put to use.

HEALTH CARE

❖ **White Box testing: -**

White Box (or glass box) testing is the process of giving input to the system and checking how the system processes input to generate output.

It refers to the testing a system with full knowledge and access to all source code and other architecture documents. This testing enables to reveal bugs and vulnerabilities quickly in comparison with trial and error method. More complete testing coverage is ensured by exactly knowing what to test.

White box testing involves thorough testing of the application. It requires knowledge of code and the test cases chosen verifies if the system is implemented as expected. It typically includes checking with the data flow, exceptions, and errors, how they are handled, comparing if the code produces the expected results.

❖ **Black Box testing: -**

Black Box testing is the process of giving input to the system and checking the output of the system without bothering how the output is generated.

It refers to testing a system without knowledge of specification to the internal workings of the system, access to the source code, and knowledge of the architecture.

Essentially this approach mimics in a close approach, how an attacker typically follows approach to the application. However, the

HEALTH CARE

uncovering of issues or vulnerabilities could be further longer, because of lacking internal application knowledge.

Black box testing is done at an outer level of the system. Test cases merely check if the output is correct for the given input. User is not expected to the internal flow or design of the system.

❖ **Grey Box testing: -**

Grey Box testing is a combination of White Box and Glass Box Testing. In this, the tester has little knowledge about the internal working of the software.

So, he tests the output as well as process carried out to generate the output.

It refers to a testing system by knowing limited information about the internals of the system. The knowledge is always limited for detailed design documents and architecture diagrams. In concise, it is a good blend of black and white box testing, which leverages the strengths of each of the testing.

Grey box testing is a combination of both black box and white box testing. This is because it involves access to the system; however, at an outer level. A little knowledge of the system is expected in Grey box testing.

HEALTH CARE

❖ **Non-functional Testing: -**

Non-functional testing is the testing of a software application or system for its non-functional Requirements: the way a system operates, rather than specific behavior of that system. This is contrast to functional testing, which tests against functional requirements that describe the functions of a system and its components. The names of many non-functional tests are often used interchangeably because of the overlap in scope between various non-functional requirements. For example, software performance is a broad term that includes many specific requirements like reliability and scalability.

❖ **Software Testing Strategies: -**

Testing Involves:

- A. Unit Testing
- B. Integration Testing
- C. Acceptance testing

A. Unit Testing: -

The unit testing is purpose of unit testing is to ensure that each program is fully tested.

HEALTH CARE

B. Integration Testing: -

The integration testing is individual program units or programs are integrated and tested as a complete system to ensure that the software requirements.

C. Acceptance Testing: -

This testing involves planning and the execution of various types of test in order to demonstrate that the implemented software system satisfied the requirements. Finally, our project meets the requirements after going through all the levels of testing.

6.2 COST ESTIMATION MODEL

❖ Costing Objectives :-

➤ To Ensure Viability :

- Feasibility Study
- Resource Planning
- Cost/Benefits Analysis

➤ Provide Input for pricing (including bidding negotiations etc.)

➤ To serve as a management tool :

- Cost Control and Management
- Risk Management
- Budget planning

➤ Criteria for good project costing :

- Accurate
- Realistic (good procurement and engineering practice)
- Consistent
- Transparent
- St-effective
- Good Documentation

HEALTH CARE

PROJECT COSTING

Many look upon project testing as a cost. While it is true that software testing does cost money, in many cases significant amounts of money, it is also an activity that an organization to avoid costly failures further on in the development process.

Most understand this relationship project testing is spending money to save money. What many do not also realize is that software testing also produces valuable assets for the organization. This article will discuss those assets of software testing.

❖ Costing Estimation:-

Working time estimation is as given,

$$2 \text{ months} + 20 \text{ days} = 85 \text{ days}$$

$$5 \text{ hr / day} = 460 \text{ hours}$$

Now, the expenses & cost estimation are given below:

$$\text{Computer rent} = 6,000 /-$$

$$+ \text{Light Bill Rs. } 5 / \text{unit}$$

$$\text{Worth 400 units} = 2,000 /-$$

$$+ \text{Database design & creation} = 1,500 /-$$

$$+ \text{Coding & Validation} = 2500 /-$$

$$\text{Amount} = 12,000 /-$$

$$\text{Total} = 12,000 /-$$

HEALTH CARE

SDLC MODEL

➤ Waterfall Model :-

Waterfall approach was first SDLC Model to be used widely in Software Engineering to ensure success of the project. In "The Waterfall" approach, the whole process of software development is divided into separate phases. In Waterfall model, typically, the outcome of one phase acts as the input for the next phase sequentially. Following is a diagrammatic representation of different phases of waterfall model.

HEALTH CARE

➤ Iterative Model :-

In Iterative model, iterative process starts with a simple implementation of a small set of the software requirements and iteratively enhances the evolving versions until the complete system is implemented and ready to be deployed. An iterative life cycle model does not attempt to start with a full specification of requirements. Instead, development begins by specifying and implementing just part of the software, which is then reviewed in order to identify further requirements. This process is then repeated, producing a new version of the software at the end of each iteration of the model.

HEALTH CARE

➤ V Model :-

The V - model is SDLC model where execution of processes happens in a sequential manner in V-shape. It is also known as Verification and Validation model. V - Model is an extension of the waterfall model and is based on association of a testing phase for each corresponding development stage. This means that for every single phase in the development cycle there is a directly associated testing phase. This is a highly disciplined model and next phase starts only after completion of the previous phase.

➤ V Model Design :-

Under V-Model, the corresponding testing phase of the development phase is planned in parallel. So there are Verification phases on one side of the .V. and Validation phases on the other side. Coding phase joins the two sides of the V-Model. The below figure illustrates the different phases in V-Model of SDLC.

HEALTH CARE

HEALTH CARE

➤ **Spiral Model :-**

The spiral model combines the idea of iterative development with the systematic, controlled aspects of the waterfall model. Spiral model is a combination of iterative development process model and sequential linear development model i.e. waterfall model with very high emphasis on risk analysis. It allows for incremental releases of the product, or incremental refinement through each iteration around the spiral.

➤ **Spiral Model Design :-**

The spiral model has four phases. A software project repeatedly passes through these phases in iterations called Spirals.

Identification:

This phase starts with gathering the business requirements in the baseline spiral. In the subsequent spirals as the product matures, identification of system requirements, subsystem requirements and unit requirements are all done in. This phase

This also includes understanding the system requirements by continuous communication between the customer and the system analyst. At the end of the spiral the product is deployed in the identified market.

HEALTH CARE

➤ Spiral Model Diagram :-

HEALTH CARE

➤ Prototype Model :-

The basic idea here is that instead of freezing the requirements before a design or coding can proceed, a throwaway prototype is built to understand the requirements. This prototype is developed based on the currently known requirements. By using this prototype, the client can get an “actual feel” of the system, since the interactions with prototype can enable the client to better understand the requirements of the desired system. Prototyping is an attractive idea for complicated and large systems for which there is no manual process or existing system to help determining the requirements. The prototype is usually not complete systems and many of the details are not built in the prototype. The goal is to provide a system with overall functionality

6.3 FUTURE ENHANCEMENTS

A good project is one which never stops developing according to the changing situations and technologies there is a lot of scope of future enhancements.

- ❖ Online Payment.
- ❖ User Search History.
- ❖ New Visitor/User To-Do List.
- ❖ Notifications to users.
- ❖ Price and Type-Filtered Search of Items.
- ❖ Change password option for users.

6.4 BIBLIOGRAPHY

For the successful working of my project I have referred many sources for the code snippets, logic and tips and tricks from the various books as well as web sites. Most I searched for the required possessions on the google.com search engine.

6.5 APPENDICES

- ❖ The project Healthcare is the customize working on health tips Provider.
- ❖ The software takes care of all requirements and helps to the customer for choosing good food.
- ❖ We have successfully designed, coded and implemented our project with a lot of Hard work.
- ❖ Finally, I would like to thank our project guide DR. NEHA K. SHAH helpful guidelines for our project. Also given suggestion when difficulties raised in our project.
